LEATHER STRUCTURE

YAGI SANGYO KK

Inventor(s): ; YAGI KANICHI

Application No. 04025791, Filed 19920116, Published 19940517

Abstract: PURPOSE: To provide a leather structure which is prevented from suffering a damage, need not be frequently cared for, can retain its value for a long time, and has improved processability by laminating a covering film to a tanned base leather.

CONSTITUTION: An animal fur is stripped of the hair and is tanned to produce a base leather 1. A covering film 2, which preferably is a vinyl leather, is laminated to the leather 1 with an adhesive, heating, etc. The laminate is cut according to use and processed to produce an article, e.g. a garment. Since an external shock is absorbed by the film 2, the leather 1 can be protected against it.
